Data downsizing for simplified S/4 migration

Business Case

Migration to S/4HANA with transfer of existing processes and data (Brownfield): Archiving dramatically reduces the volume of data to be migrated. Application data should therefore be archived as extensively as possible for a more efficient and compliant migration to S/4HANA. Access to the archived data should be unrestricted in the new S/4HANA system.
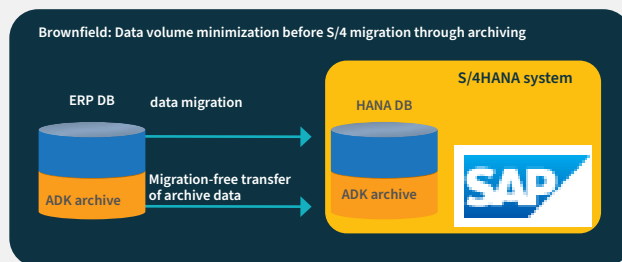

THE SOLUTION

- Unrestricted access to archived data with the PBS archive add ons
- Fully analogue to standard SAP transactions and reports
- Extending the standard SAP archiving with seamless data access
- Modular solution, available for all major SAP modules
- GoBD/GDPR-compliant data extraction for company and tax audits

THE ADVANTAGES

- Archive data does not need to be migrated to S/4HANA
- Simultaneous or separate display of online and archived data, parameterized as required
- Seamless integration into the SAP authorization concept and SAP recommendations for GDPR compliance

Brownfield: Data volume minimization before S/4 migration through archiving

S/4HANA system
HANA DB
ERP DB   data migration
ADK archive
Migration-free transfer of archive data
ADK archive
SAP

Reduced migration period by transferring archive data

- The user does not notice any difference whether the data is provided from the primary database or from the archive
- No user training necessary
- Go-live within days, available for ERP and S/4HANA
- Certified by SAP SE
